### Message from the Guest Editors

Dear Colleagues,

As with many conditions, certain segments of the population seem to be bearing a disproportionate burden of illness and death from coronavirus disease 2019 (COVID-19) in the United States. Community-engaged efforts are presumably an effective mechanism to ensure that inequities in testing and treatment are minimized. Moreover, myriad social determinants of health must be understood and addressed to ensure that public health interventions are tailored and effective..

Manuscripts highlighting community-engaged approaches to addressing health disparities in context of the COVID-19 epidemic are sought for this Special Issue. Of particular interest is scholarship surrounding how health professionals work with communities to facilitate equitable access to accurate and culturally appropriate information, quality health care, and social services that address a wide array of consequences related to the pandemic. It is anticipated that readers will be able to develop and implement effective interventions based on an emerging base of evidence and promising practices featured in articles published in this Special Issue.

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed by the Science Citation Index Expanded (Web of Science), Social Sciences Citation Index (Web of Science), MEDLINE (PubMed), Scopus (Elsevier) and other databases. Full-text available in PubMed Central.

**Rapid Publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 15.3 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2020).
